RESOLVING JD EDWARDS DATA MANAGEMENT CHALLENGES

Are you suffering from ERP data overload? Do you waste a lot of time just trying to keep ERP data at manageable levels? Wouldn't you like to finally take control of your data?

Efficient data management ensures that data is stored in the most *cost-effective* and *appropriate* format. Moving non business critical data out of the production database to lower cost storage improves ERP performance, leading to faster response-times for your end-users, and less problems with back-ups and maintenance for your IT team.

ARCTOOLS has become the market-leading ERP data management tool for Oracle JD Edwards because it is easy to use and it delivers results quickly. To date, three hundred Oracle JD Edwards clients have already chosen ARCTOOLS to help purge and archive their ERP data.

QUICKER RUN TIMES at TRANSMED S.A.L

At **Transmed S.A.L** (www.transmed.com) ARCTOOLS helped the IT team reduce the production database by 30 percent, improving daily report run times by over 50 percent.

QUICKER & EASIER UPGRADES - GEORGE P. JOHNSON & MAYER ELECTRIC

Reducing ERP data load not only delivers improved business performance on a daily basis, it also means quicker and less risky upgrades. At **George P. Johnson** (www.gpj.com), Brian Bartkowiak (VP Information Technology Worldwide) and his team used ARCTOOLS to significantly reduce data conversion times during their upgrade to E1 V 9.0. During their previous upgrade, data conversion had taken approximately thirty-six hours, with ARCTOOLS, GPJ were able to convert all their data in just twenty-four hours. During the project, over twenty million rows were archived from the FO911 account ledger alone.

Similarly, at **Mayer Electric** (www.mayerelectric.com), Barry Carden (VP & CIO) and his team used ARCTOOLS when upgrading to E1 8.12. Prior to using ARCTOOLS, the team estimated that data conversion would take two and a half weeks. By using ARCTOOLS, Barry was able to reduce the production database by twenty percent and convert all the data in just thirty-six hours.

ARCTOOLS – EXPERTS IN JD EDWARDS DATA MANAGEMENT

ARCTOOLS' strength comes from the fact that it was developed in collaboration with the JD Edwards company by JD Edwards Experts. The ARCTOOLS team have deep

knowledge of the JD Edwards application and table structures. What's more, ARCTOOLS projects are run by the people who developed the software which means that you get to benefit from the insights and learnings of the hundreds of projects already completed. As Barry Carden from Mayer Electric said, *"there is just about nothing related to purging and archiving that they haven't already seen!"*

RAPID ROI

ARCTOOLS is an extremely flexible and easy to use tool. A purge and archive project using ARCTOOLS does not demand a big time commitment from your IT team and causes minimum disruption to end-users, as purging and archiving can take place even while end-users are still on the system.

Optimizing your ERP data delivers real business benefits: less money spent on hardware; a faster, more efficient ERP; but perhaps most importantly, with less time spent backing up and maintaining data, the IT team have more time to spend on more strategic, higher value-added tasks. So what are you waiting for? Isn't it about time that purging and archiving made it to the top of your to do list?
